

## UPDATED GHIN INFORMATION

Please note the following reminders and information that applies to all WSCGA Clubs:

- The conversion of course rating data may have affected a change of the slope and the rating by 1 on the slope and one-tenth on the rating. If that has occurred, please contact the WSCGA office and the rating can be corrected. The update will appear on the club handicap computer the next time the computer transmits.
- T score files may show a score and a rating and slope that do not look familiar. GHIN had to “massage” the score and rating and slope in some instances to retain the integrity of the *differential*. Please remind your members that it is the *differential* that matters and not the score. Because GHIN used 113 as the slope and a rating of 70.0, they had to enter a score that may be substantially lower than the actual score that was made but when the differential is calculated it is the correct differential and it is NOT necessary to correct the score or the rating and the slope.
- Please re-start (re-boot) the club handicap computer at least once every two weeks as per the **GHIN Quick Start Guide**. When you have a chance, please re-read the **Quick Start Guide** now that you have used GHIN applications for the past month.
- Remind your members they can post using the score post link on the WSCGA website or at GHIN.com. (IF your club authorizes Internet posting)
- When you e-mail the WSCGA office, please be sure to ALWAYS identify your club affiliation, your name (Mary?), your title (Handicap Chair, Tournament Chair).
- Please have your Liaison or other club official update your club information sheet on the WSCGA website when your officers change.
- When a member has two GHIN numbers and you request a merge of the numbers, please provide the member’s name, BOTH numbers and indicate which number they wish to retain.
